PERSONNEL HOUSING, TATISHCHEVO ICBM COMPLEX, USSR

This report is an analysis of personnel housing associated with the Tatishchevo ICBM Launch Complex. Tatishchevo is unique in being the only location where Type III-D single silo launch sites have been deployed other than at a pre-existing SS-7 ICBM launch complex. It was, however, originally intended to be a hardened ICBM complex for the SS-5 missile system. It is also unique in that no barracks-type buildings have been identified to date at the control centers. Further, there is remarkably little of the typical permanent military housing customarily seen at the support facilities of the older complexes.

However, since work on the Type III-D sites began, there has been a notable expansion of housing facilities near and adjacent to the town of Tatishchevo itself. Measurements have been made of all housing facilities presented in Table I. Significant observations on the status of these housing facilities are as follows:

Complex Support Facility (Figure 1)

Only four barracks-type buildings have been added to the complex support facility since late [REDACTED] From [REDACTED] to [REDACTED], there has been virtually no change in the housing facilities, most of which appear to be temporary in nature and probably used to house construction workers.

Area A (Figure 2)

Work began in this area, situated just east of the town of Tatishchevo, late in the first quarter of [REDACTED] and is still continuing. The structures appear to be permanent two story apartment-type housing and from the timing, are probably related to the complex. Activity observed on [REDACTED] indicates that at least double the number of buildings cited in Table I will eventually be constructed here.

Area B (Figure 2)

25X1D

Chronologically, this is the oldest of the areas of interest and is probably military in nature. Construction was just beginning here on [REDACTED]. It is largely a mixture of permanent barracks-type buildings and small family housing units. The latter are similar to those observed at some of the support facilities of the older complexes and are unlike any of the dwellings previously erected in the town of Tatishchevo. One large single story T-shaped building and a large multi-story H-shaped building are also present. Some construction activity is still going on, but no major additions to this area are indicated.

Area C (Figure 2)

25X1D

Activity began here late in the [REDACTED]. The area consists almost entirely of temporary barracks-type buildings, possibly military, with an adjacent athletic field. No additional construction is underway.

Area D (Figure 2)

25X1D

In the [REDACTED], a small area containing six temporary barracks-type buildings, probably military, and an adjacent motor pool was added on the northwest side of the town of Tatishchevo. The area has remained unchanged since that time, and no further expansion is indicated.

All measurements have been made by the CIA/IAD project analyst, using scale factors provided by NPIC/TID. They should not be construed as being mensuration data compiled by the NPIC Technical Intelligence Division.
